

Submarine Maintenance Facility, WA

Through a competitive tender process last year Broad was awarded the construction contract by The Australian Submarine Corporation for a new, world-class submarine repair and maintenance facility.

In 2003 the ASC gained a contract to provide through-life support and upgrades to the RAN's six Collins Class submarines based at Garden Island off the WA coast. Broad is now in the process of constructing the main maintenance facility

including two floors of office spaces within the 120m long, 25m high and 40m wide hall. A storage warehouse, guardhouse and part of the rail transfer leading down to the Common User Facility's new floating dock will also be constructed.

A whopping 680 tonne of structural steel will be needed to build the facility into which a submarine can be rolled on a purpose-built rail transfer line. The structural steel package alone is worth more than \$3 million and is one of the major components of the construction work.

Broad is aiming to complete the project before Christmas to avoid the holiday shutdown period.

Client:
The Australian Submarine Corporation

Location:
Australian Marine Complex
Henderson, WA

Value:
\$32,000,000

Delivery Method:
Construction Management

Completed:
